Medvedev, S., Koritskaya, O., and Alekseeva, E.
FREE RADICALS IN POLYMERIZATION PROCESSES.
[1961] 18p. 10 refs.
Order from OTS or SLA \$1.60

61-16902

Trans. of Zhurnal Fizicheskoi Khimii (USSR) 1943.
v. 17, p. 391-407.

DESCRIPTORS: *Polymerization, *Free radicals,
Reaction kinetics, *Chloroprenes.

In "liquid phase" polymerization of chloroprene under
the action of benzoyl peroxide or tetraethyl hydroperoxide
free radicals can be detected by (1) liberation of iodine
from hydrogen iodide, and (2) addition of iodine. The
second method gives satisfactory quantitative results.
An increase of the amount of free radicals in the
process of polymerization of chloroprene occurs (1) as
a result of increasing viscosity of the medium, hindering
interaction of radicals (chain rupture), and (2) be-
cause of the branching of polymerization chains. The
(Chemistry--Physical, TT, v. 6, no. 7) (over)

Medvedev, S. and Tsaitlin, P.
OXIDATION AND POLYMERIZATION OF STYRENE.
[1961] 15p. 14 refs.
Order from OTS or SLA \$1.60

61-18187

Trans. of Acta Physicochimica U R. S. S., 1945,
v. 20, p. 3-30.

DESCRIPTORS: *Styrenes, Polymerization, Oxidation,
Free radicals.

Experiments showed that styrene oxidation comprises two chain processes, a primary and a secondary one, which take place with the intermediate formation of peroxide compounds. The formation of secondary chains is due to the decomposition of oxyperoxides formed from the unstable peroxides of benzaldehyde and styrene. Propagation of both chain processes occurs through free radicals. The ratio of oxidized to polymerized styrene remains constant at different temperatures, with admixture of benzaldehyde and benzoyl (Chemistry--Physical, TT, v. 6, no. 7) (over)
